

**DEPARTMENT OF CIVIL ENGINEERING**

**Month:** July-2025

- As part of the academic curriculum and to provide practical exposure to the students, the II Year – III Semester Civil Engineering students visited a construction site near Alumuru on 10/11/2025. The industrial visit was organized with the objective of helping students understand the practical aspects of construction activities and relate their classroom learning to actual field practices. During the visit, the students observed various stages of construction work and gained valuable knowledge about the procedures followed at a construction site. The students were introduced to the importance of proper planning, site preparation, execution, supervision, and safety measures involved in construction projects. They also observed the methods used for handling construction materials, equipment, and manpower at the site.
