

DEPARTMENT OF CIVIL ENGINEERING

Month: October-2025

➤ The I Year Civil Engineering students actively participated in a Seminar on “Advanced Civil Engineering Structures” held on 17/10/2026. The seminar was organized with the objective of providing students with an opportunity to gain additional knowledge about modern developments, innovative techniques, and emerging practices in the field of Civil Engineering.

The programme introduced students to the importance of advanced structural systems in the development of safe, sustainable, and efficient infrastructure. The students gained an understanding of how modern engineering principles, innovative construction materials, advanced analysis methods, and contemporary technologies are being incorporated into the design and construction of complex structures.

During the seminar, various aspects of advanced civil engineering structures were discussed, including modern structural systems, innovative construction methods, high-performance materials, structural safety, durability, sustainability, and the role of technology in structural engineering.
