

DEPARTMENT OF CIVIL ENGINEERING

Month: December-2025

- The II Year – IV Semester Civil Engineering students visited the Mid Pennar Reservoir (MPR) at Penakacherla on 29/12/2025 as part of their academic and field-based learning activities. The visit was organized to provide students with practical exposure to water resources engineering and to help them understand the planning, construction, operation, and management of a major reservoir system.

During the visit, the students observed the various components and features associated with the reservoir and gained a better understanding of how water storage and distribution systems are planned and managed. The faculty members explained the importance of reservoirs in irrigation, water conservation, flood management, and sustainable utilization of water resources.
