

DEPARTMENT OF CIVIL ENGINEERING

Month: December-2025

- The III Year-V Semester Civil Engineering students visited a reinforcement construction site at Kovur Nagar, Ananthapur, on 29/12/2025 as part of their academic field visit. The visit was organized to provide students with practical exposure to reinforcement work and to help them understand the application of structural engineering concepts in actual construction practices.

During the site visit, the students observed various activities related to the cutting, bending, placing, tying, and fixing of reinforcement steel. The faculty members and site personnel explained the importance of reinforcement in reinforced cement concrete (RCC) structures and discussed how steel reinforcement works together with concrete to provide strength, stability, and durability to structural members.
